**Data sheet**

Sage Intacct Interactive Visual Explorer

Explore data visually to get answers to questions you didn't know to ask

Get answers to the questions you didn't know to ask with Sage Intacct Interactive Visual Explorer. Interactively explore your financial data using a multi-angle, multi-dimensional graphical tool. With data visualization, you clearly understand insights at a glance. You don't need special skills or IT to explore your data. And, you turn insights into action with visual storytelling and narration. So, you can transform your business strategy and make strategic, data-driven decisions.

Get instant insights with data visualization

- Visually analyze your data across multiple business dimensions to instantly understand meaning.

- Compare data visually over multiple time periods to identify trends, patterns, and correlations in seconds.

- Eliminate reporting time lag and speed decision-making with real-time financial data.

Sage

Visual data provides insight at a glance.

Explore your data without the need for IT or specialized skills

- Self-serve using over 200 prebuilt, interactive visuals. Or easily build your own with hierarchical field selection, drag and drop, and multiple views.

- Interactively narrow your focus and uncover new insights for further investigation.

- Be confident in the accuracy and security of your data with native reporting built on live, transactional data and shared permissions.

Turn your insights into actions with visual storytelling and narration

- Tailor and select the visuals that tell your story in the best format for your audience and inspire confidence in decision-making.

- Enhance reviewer and decision-makers' understanding of your story with narration.

- Share insights in an instant, either internally via native Sage Intacct Dashboards or externally (PowerPoint, PDF, CSV) for third-party consumption.

"We use Sage Intacct Interactive Visual Explorer to manage project resources and utilization as well as to compare budgets. It's very intuitive. We love that we can quickly navigate between projects and customize graphs on the fly. It replaces Excel for us because it's more accurate, easier to analyze the information, and more collaborative. We can focus on strategy instead of gathering the data."

~ Leanne Malsbury, Associate Director of Finance, Halloran Consulting Group
